Create an account and sign up for a free 14-day trial
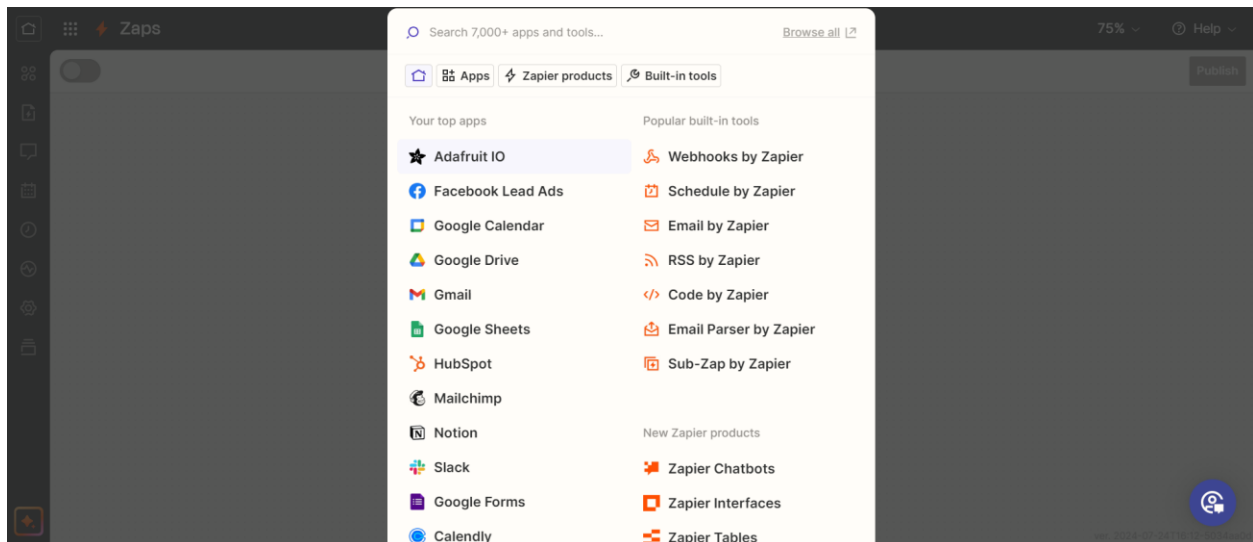

Click "Create" and from the drop-down menu select "Zaps"

Click the "Trigger" box. This refers to an event that you want to trigger the Zap.

If using a feed from Adafruit to trigger you Zap, select or search for "Adafruit IO"

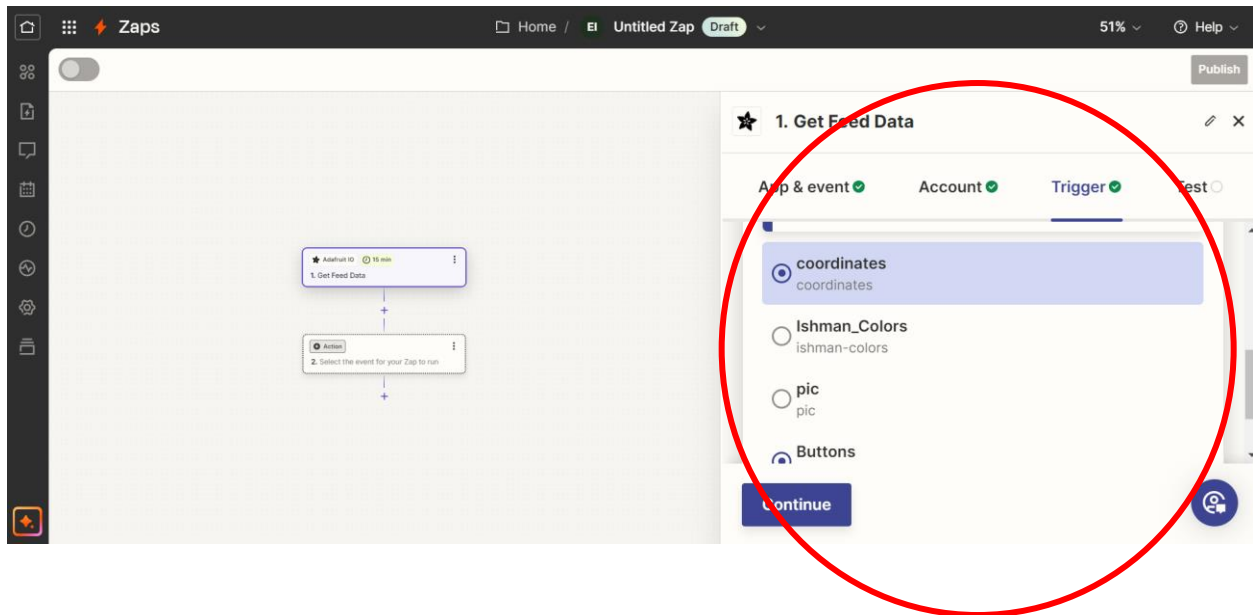

Select "Get Feed Data"

Enter your Adafruit username and key from the Adafruit.io account

Connect an Account | Zapier - Google Chrome

zapier.com/engine/auth/start/AdafruitioCLIAPI@1.6.0/?_zapier_auth_id=48313359

Allow Zapier to access your Adafruit IO Account?

Username (required)

Your Adafruit IO username.

Api Key (required)

Found on Adafruit IO in the "View AIO Key" link from the sidebar on your profile page.

Yes, Continue to Adafruit IO   Cancel

Once logged in, you should see your feeds populate on the right panel. If they don't show up right away, try logging out and back into Zapier, or clicking the refresh button in the right panel, or entering the feed name manually by clicking "Custom" and typing JUST the feed name or /feed name.

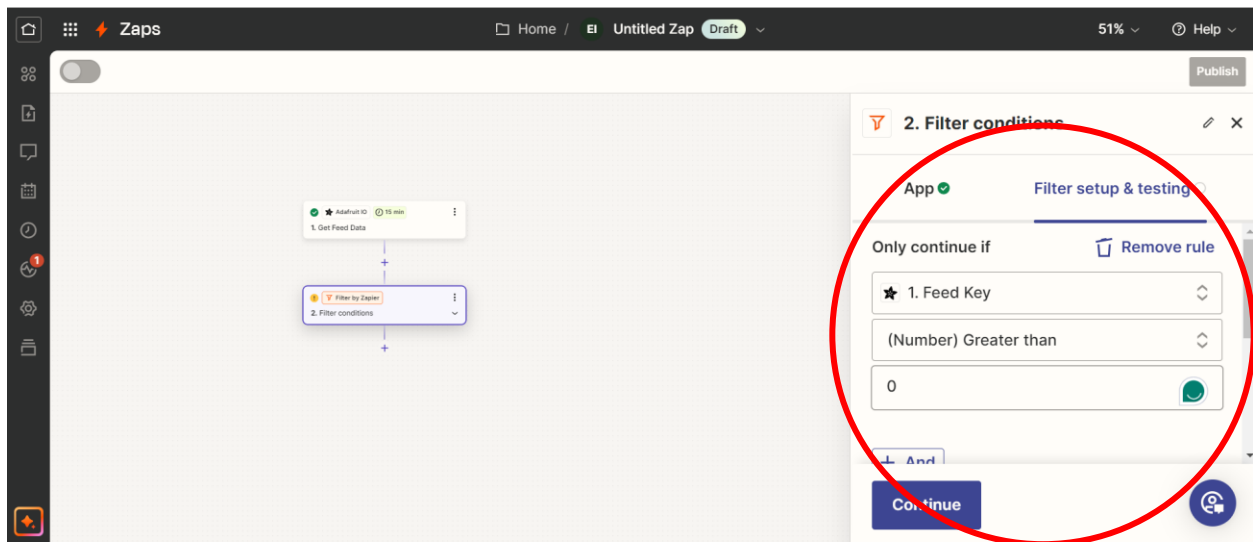

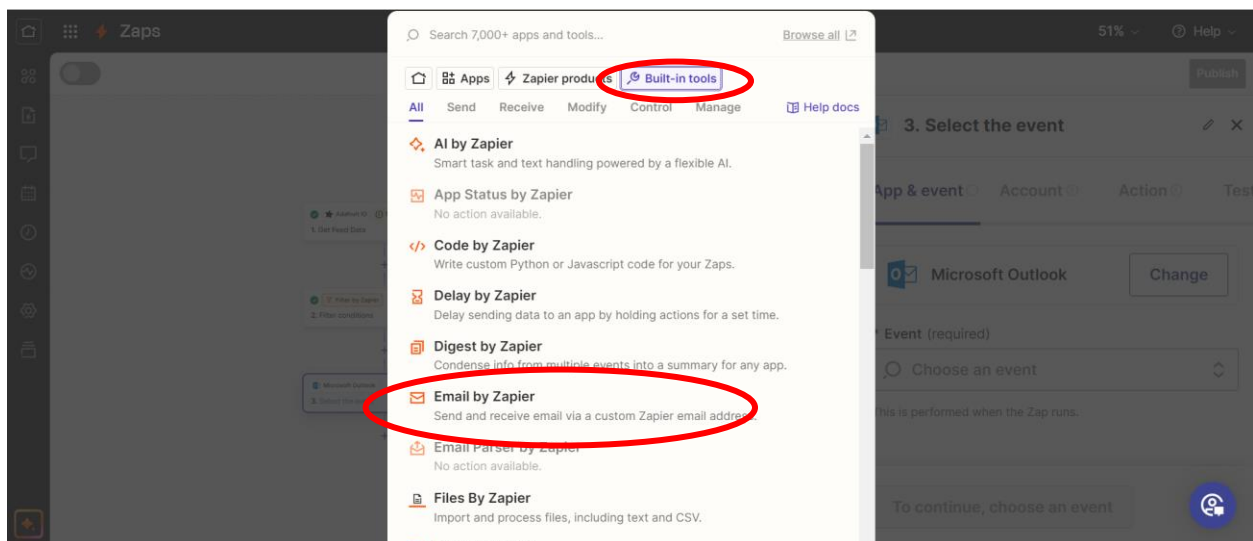

Test your trigger

Next, select the "Action" box, then select "Filter By Zapier".

Set a condition for the trigger to activate. In this example, my trigger will activate only if the value from my feed is greater than 0.

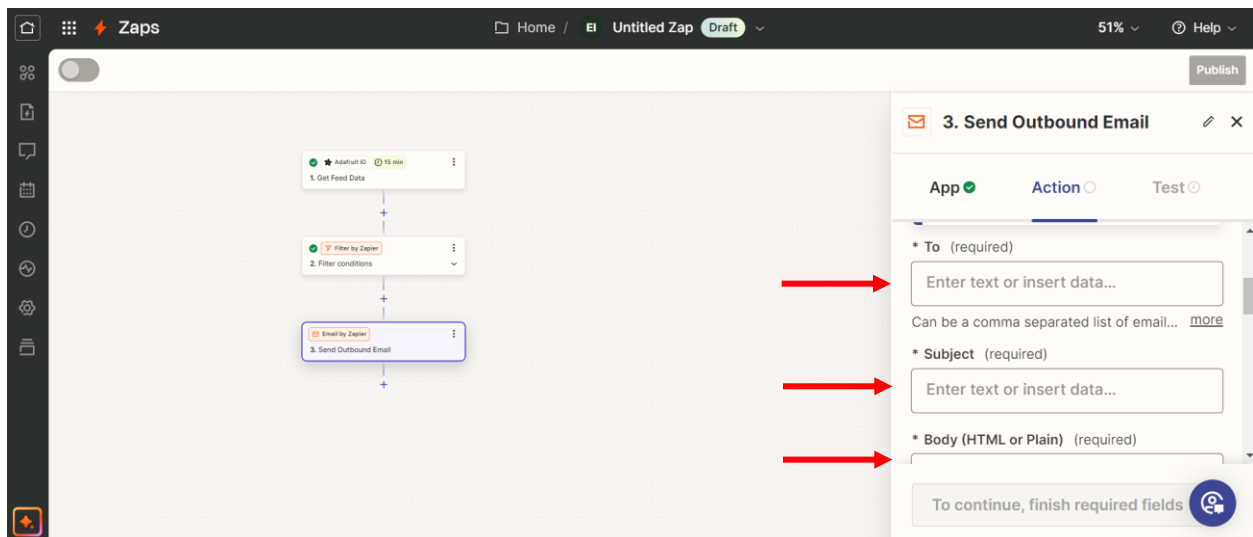

After setting up your condition select the third box. Within the "Built-In Tools" tab look for "Email by Zapier"

Select "Send Outbound Email"

Enter the required (*) information

Lastly, test and publish your Zap, then check your email. There may be a slight delay of anywhere between 30 seconds – 2 minutes for the email to show up.

Zap published

Your Zap is on and using version "v1".

This message will dismiss after 10 seconds.
